

## General Description

The Skytop SUM3030-MTBD is a complete GPS/GNSS engine module that features super sensitivity, ultra low power and small form factor. The GPS/GNSS signal is applied to the antenna input of module, and a complete serial data message with position, velocity and time information is presented at the serial interface with NMEA protocol or custom protocol.

Its  $-165\text{dBm}$  tracking sensitivity extends positioning coverage into place like urban canyons and dense foliage environment where the GPS/GNSS was not possible before. The small form factor and low power consumption make the module easy to integrate into portable device like PNDs, mobile phones, cameras and vehicle navigation systems.

## Applications

- LBS (Location Based Service)
- PND (Portable Navigation Device)

## Interfaces Configuration

**Power Supply:** Regulated power for the SUM3030-MTBD is required. The input voltage Vcc should be 5.0V  $\pm$ 10%, maximum, current is no less than 35mA. Suitable decoupling must be provided by external decoupling circuitry.

**USB Ports:** :SUM3030-MTBD modules provide a USB version 2.0 FS (Full Speed, 12Mbit/s) interface as an alternative to the UART. The pull-up resistor on USB\_DP is integrated to signal a full-speed device to the host. The VDD\_USB pin supplies the USB interface, independently from the VDD\_IO pin.

SUM3030-MTBD provides a Microsoft® certified USB driver for Windows XP and Windows Vista operating systems. Windows 7 will also be supported following certification

### Software Protocol

#### NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS&BeiDou specific messages all start with \$GPxxx/GNxxx/BDxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

The skytop SUM3030-MTBD supports the following NMEA-0183 messages: GGA, RMC, GSA, GLL, GSV, VTG
